

Putting data to work: How research institutions can get the most out of their data by harnessing the cloud.

Interested in learning how to collect, analyze, and report on data for your research organization? You'll hear from nonprofit innovators such as Chan Zuckerberg Biohub and Consultative Group on International Agricultural Research (CGIAR) as they share how nonprofit labs and institutions can make use of data to support ground-breaking research in collaboration with Amazon Web Services (AWS).

Whether you are getting started with the cloud, an advanced user, or just curious about data management and analytics, you will hear a variety of stories to help you on your cloud journey including how researchers are able to access open datasets and apply data visualizations to accelerate scientific discovery. Lastly, tune in to hear AWS solutions architects walk through a detailed overview of data lakes and use cases for research organizations.

Regards,
The AWS Nonprofit Team
